Experience

Design Engineer — Payment Infrastructure, AI Verification, Agent Intelligence

Promise · San Francisco · June 2024 — Present

Designing core finance experiences across Infrastructure, AI, and Compliance. Focused on building transaction systems and intelligent interfaces that help people pay, verify, and access what they're owed — reliably and at scale.

Key Responsibilities:

- Led design for Payment Plans, Autopay Enrollment, and Flexible Payment Agreements, building the transaction flows, state machines, and confirmation surfaces that process payments across Promise's utility and benefits platforms.
- Designed AI Verification and Document Intelligence, crafting the interfaces that automate income verification, parse uploaded documents, and surface fraud signals to reviewers — reducing manual decisioning without removing human oversight.
- Built the AI Agent experience for live customer calls, designing real-time transcription, account context, and next-best-action surfaces that keep agents accurate and every interaction compliant.
- Shaped the 0 → 1 product experience for PromisePay, owning design through production code in React and Next.js — a complete payment product tied directly to enterprise contracts and company valuation.
- Built Promise's design system to ensure consistency and scalability across payment, verification, and agent-facing surfaces.
